PRODUCT OVERVIEW

1.Material

TPE (Thermoplastic Elastomer) is a flexible, durable material that combines the properties of rubber and plastic.
It is soft, stretchable, and can be molded when heated.

Durable & Flexible: Resists wear and keeps shape.
Sustainable: Recyclable and free from harmful chemicals.
Non-toxic & Soft: Safe for kids and pets with a comfortable feel.
Heat-resistant: Performs well in both hot and cold environments.
Low Maintenance: Easy to clean and install.

Tips: This TPE product comes unpainted in its natural white finish. You can paint it yourself for a glossy look, but please note the raw material has a matte texture.

2.Heavy-duty adhesive

Premium acrylic adhesive ensures high bond strength with no VOC emissions.

Tips: Adhesive strength is temperature-sensitive. In winter, briefly heat the backing with a hairdryer for better bonding. In summer, high temperatures may soften the adhesive.

3.Flexible strip

Highly flexible material bends effortlessly for creative DIY projects. Simple to cut and shape using household tools like scissors or blades.

Tips:After receiving the product, it is recommended to unfold it and let it sit for a period of time to return to its original state before using it

4.TPE Material Paint Compatibility Guidelines

Incompatible Paints

1.Solvent-based (oil/nitro paints) → Dissolves TPE
2.High-temp cure (baking/powder coatings) → Max 80°C tolerance
3.Strong acid/alkali → Causes brittleness

Recommended Solutions

1.Water-based acrylic: Eco-friendly & safe
2.Polyurethane (PU) coatings: Flexible & durable
3.TPE-specific colorants: Optimal compatibility

Testing
Test patch → 24h observation (wrinkling/delamination /elasticity)
