PRODUCT OVERVIEW

1. Material

TPE (Thermoplastic Elastomer) is a flexible, durable material that combines the properties of rubber and plastic. It is soft, stretchable, and can be molded when heated.

Durable & Flexible: Resists wear and keeps shape.
Sustainable: Recyclable and free from harmful chemicals.
Non-toxic & Soft: Safe for kids and pets with a comfortable feel.
Heat-resistant: Performs well in both hot and cold environments.
Low Maintenance: Easy to clean and install.

Tips: This TPE product comes unpainted in its natural white finish. You can paint it yourself for a glossy look, but please note the raw material has a matte texture.

2. Heavy-duty adhesive

Premium acrylic adhesive ensures high bond strength with no VOC emissions.

Tips: Adhesive strength is temperature-sensitive. In winter, briefly heat the backing with a hairdryer for better bonding. In summer, high temperatures may soften the adhesive.

3. Flexible strip

Highly flexible material bends effortlessly for creative DIY projects. Simple to cut and shape using household tools like scissors or blades.

Tips: After receiving the product, it is recommended to unfold it and let it sit for a period of time to return to its original state before using it.

4. Product Notes & Installation Tips:

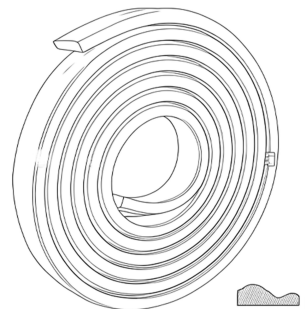

1. This product is made of TPE (Thermoplastic Elastomer) material with a natural matte white color. The surface finish reflects the material's genuine texture and is not a quality defect.

2. Installation Temperature: Adhesive performance may decrease in cold environments. Please install at 20°C (68°F) or above. If necessary, use a hair dryer to slightly warm the surface and adhesive before applying.

3. Painting Restriction: The TPE material is not suitable for painting or spray coating. Any attempt to paint the surface may affect adhesion and appearance.

KNOWING YOUR WALL MOLDING TRIM

Installation Guide

1. Measure

2. Cut

3. Peel

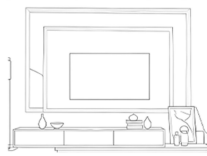

4. Stick

Versatile Applications

Our wall molding trim is designed for multiple surfaces including tile, plastic, marble, metal, glass, wood, and smooth walls. It's an ideal upgrade for bathrooms, bedrooms, living rooms, and kitchens, and can also serve as:
Baseboard / Ceiling edging
Cabinet & mirror accents
Decorative borders

Tips: If you're unsure about the material properties and decoration effects, we recommend purchasing a sample first to try out before placing a large order.

Warranty & Support

12-Month Quality Guarantee
If any product defects occur within 12 months of purchase:
